Next to above combinations shippers can request GTS to transfer bookings on interconnection points (IPs) to the virtual interconnection point (VIP) where the IP belongs to. We consider this service as a specific diversion that is neccesary for the implementation of VIPs.

Where in the matrix a "V" is used (target is a VIP), after sending us the form with your diversion request, you need to buy the capacity in an auction on the target point. If "F" is used (target is a FCFS point) we will perform the diversion within 10 business days, only if the capacity is available. See for further explanation this webpage. explanation webpage
