Tariffs Peak Supply 2021	

Dear Sir, Madam,

On the basis of the Decree on certainty of gas supply as laid down in article 10A of the Gas Act (Decree of 13 April 2004), Gasunie Transport Services (GTS), the operator of the national gas transport grid, has been taking care of the peak supply from 2004 onwards. In this decree peak supply is described as "... all provisions regarding gas purchase, flexibility services and gas transport in the national gas transport grid required to enable permit holders to provide peak supply to all residential customers in the Netherlands".

Each year we contract the facilities that are necessary to provide the Peak Supply to residential customers. With this letter we inform you about the tariffs that will be applied for providing the Peak Supply in 2021. A description of the applied calculation method can be found on our website ([Peak Supply - GTS website](#)).

The resulting and applicable tariffs for the peak supply service in 2021 are:

Tariff element	Tariff 2021	Unit
Peak supply tariff for entry capacity January	0,23666696	€/kWh/h/m
Peak supply tariff for entry capacity February	0,19963255	€/kWh/h/m
Peak supply tariff for entry capacity December	0,21147552	€/kWh/h/m
Peak supply tariff for production (Yearly Tariff)	1,04081046	€/kWh/h/y

We trust to have informed you sufficiently. However, should you have any questions, please do not hesitate to contact the GTS Customerdesk (e-mail: customerdesk@gastransport.nl or phone: +31 (0)50 521 3333)

Yours sincerely,
GASUNIE TRANSPORT SERVICES B.V.
