

Zienswijze BNetzA op de marktconsultatie van de planningsuitgangspunten voor de Groningenraming gasjaar 2023/2024

“Dear ladies and gentleman,

with reference to Gasunie Transport Services' (GTS) call for input on planning assumptions for Groningen production, security of supply and the Investment Plan 2024, we would like to underline the importance for continued high availability of natural gas from the Netherlands towards Germany. In this regard, production from the Groningen field as well as sufficient amounts of transport capacity to cover demand are essential also for the planning assumptions. It is noted positively that GTS identifies "network optimization aimed at accommodating an increase in West-East flows (from NL to Germany)".

Kind regards,”
